

Declaration of Non-Emitting Powder-Coated Profiles

To whom it may concern,

We hereby declare that all coated profiles produced by ALUMINCO S.A. are powder coated and therefore qualify as inherently non-emitting materials under the LEED v4.1 BD+C guidelines, EQ Credit: Low-Emitting Materials.

Powder coating is a thermosetting process that does not involve the use of organic-based surface coatings, binders, or sealants that could emit volatile organic compounds (VOCs).

This declaration confirms that our coated profiles meet the criteria for full compliance with LEED requirements for low-emitting materials.
