

ALUMINCO SELECTIONS

Research and Development

Our evolution and progress are an achievement coming from the inspiration of a group of people, the “heartbeat” of ALUMINCO, on whose inspiration and concept, we base our next steps and development. It is this very group of people who design, develop and test our systems before proceeding with the final validation with internationally accredited laboratories.

Technical Support and Project Engineering

When it comes to a larger project which requires expertise and extensive engineering, ALUMINCO has put in place a highly qualified group of engineers capable to carry out any study and to offer the needed professional support to architects and fabricators.

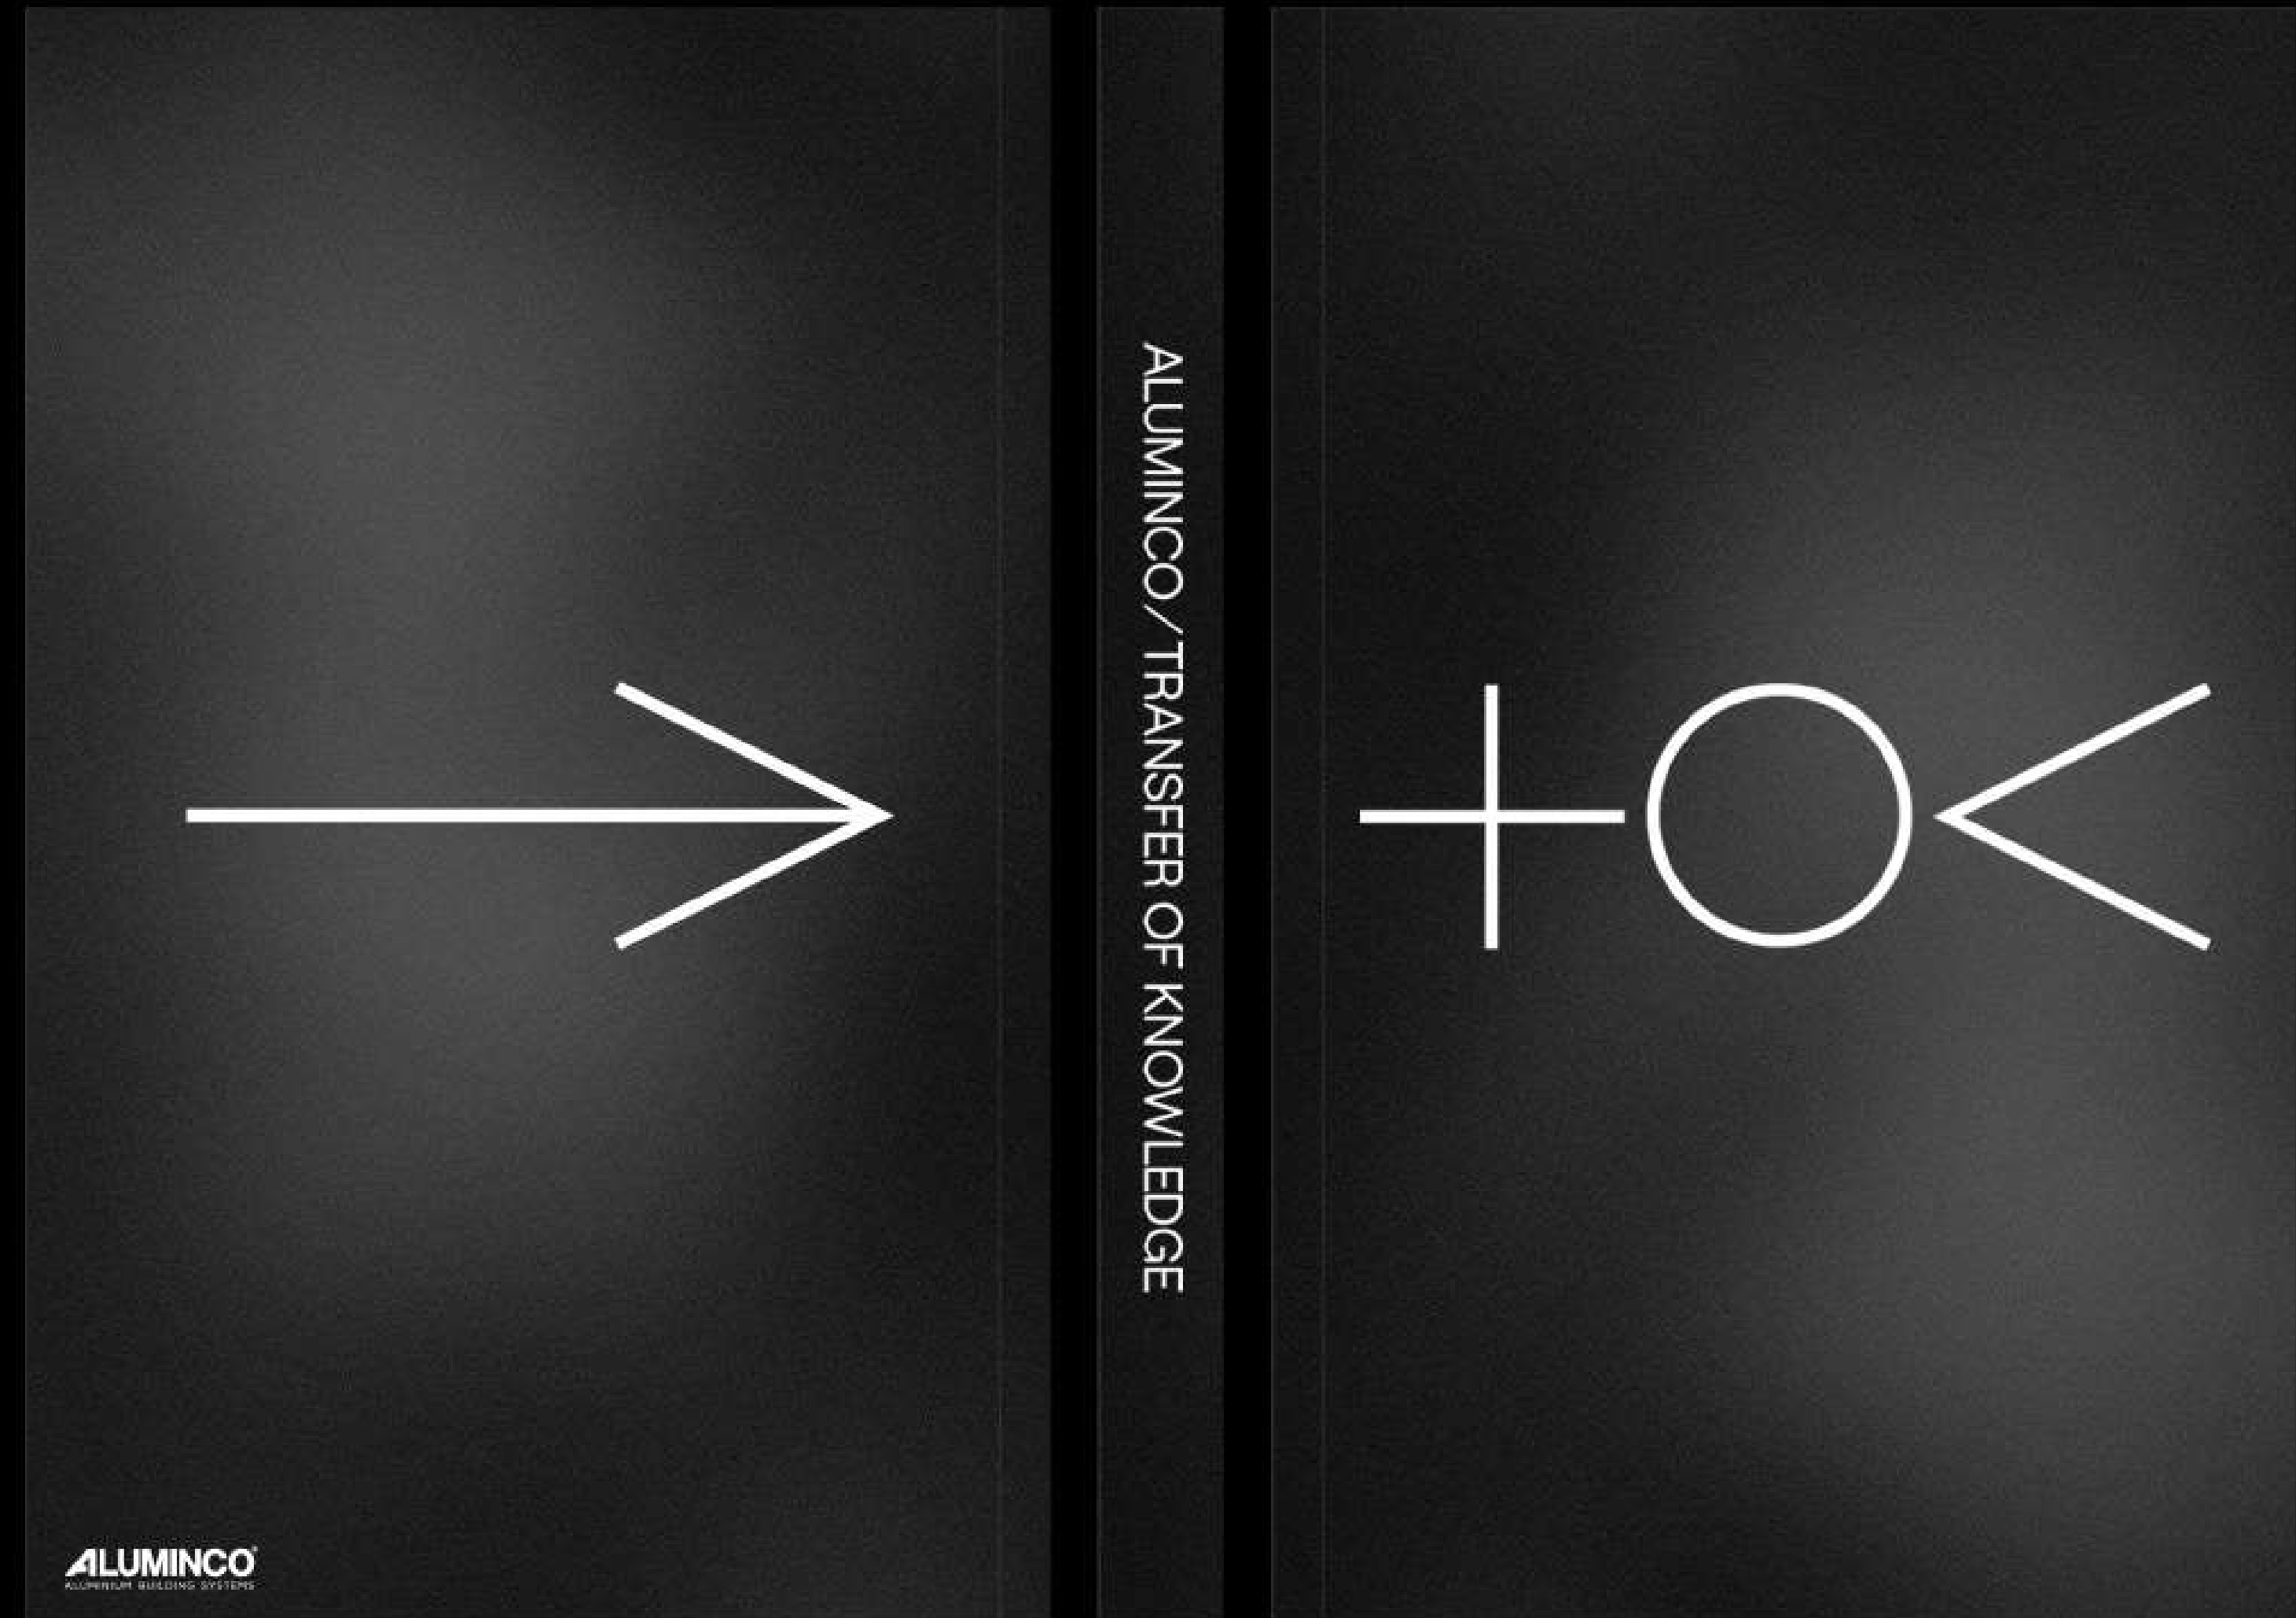

TRANSFER OF KNOWLEDGE

TOK (Transfer of Knowledge) plays a vital role in the successful implementation of ALUMINCO projects worldwide.

As a dynamic hub of expertise, TOK transforms our long-standing know-how into actionable insights, offering professionals a comprehensive guide to products, specifications, and applications.

It empowers architects and designers with the right tools and information to create integrated, future-ready solutions.
