

ALUMINCO SELECTIONS

RESEARCH & DEVELOPMENT

Research and Development

Our evolution and progress are an achievement coming from the inspiration of a group of people, the “heartbeat” of ALUMINCO, on whose inspiration and concept, we base our next steps and development. It is this very group of people who design, develop and test our systems before proceeding with the final validation with internationally accredited laboratories.

Technical Support and Project Engineering

When it comes to a larger project which requires expertise and extensive engineering, ALUMINCO has put in place a highly qualified group of engineers capable to carry out any study and to offer the needed professional support to architects and fabricators.
